

VINAY B

DevOps Engineer | Platform Engineering | MLOps | AIOps | SRE

vinaybkrishna10@gmail.com · +91 8660953284 · Bengaluru, India · github.com/Vinaycicdops · linkedin.com/in/vinaybkrishna

PROFESSIONAL SUMMARY

DevOps / SRE Engineer with 3.5+ years of production experience designing self-healing, highly observable Kubernetes platforms on AWS. Specialized in high-concurrency environments (25k+ RPS, 99.99% uptime), GitOps-driven CI/CD, and MLOps/AIOps systems. Built a dual-engine anomaly detection platform combining Isolation Forest and LSTM Autoencoders with automated drift-triggered retraining via Kubeflow Pipelines.

TECHNICAL SKILLS

Cloud & Infra	AWS (EKS, EC2, RDS, S3, VPC, IAM, Route53, ALB/NLB, KMS, ASG), Terraform, Ansible, Vault, Docker
Kubernetes	EKS, Helm, ArgoCD, HPA/VPA, RBAC, Istio, Kiali, KServe
MLOps / AIOps	Kubeflow Pipelines (KFP v2), MLflow, DVC, KServe, MinIO, Evidently AI, Isolation Forest, LSTM Autoencoder, AWS SageMaker
CI/CD & Security	GitHub Actions, GitLab CI, GitOps, Argo Workflows, CodeQL, Trivy, SonarQube, Infracost
Observability	Prometheus, Grafana, Loki, ELK Stack, New Relic, OpenTelemetry, AlertManager
Languages	Python (ML/Data Engineering), Bash, PostgreSQL, MySQL, MongoDB

PROFESSIONAL EXPERIENCE

DevOps Engineer | Volt Security Pvt Ltd - Bengaluru, India Dec 2023 – Jan 2026

- Administered production EKS clusters achieving 99.99% uptime across 8 critical microservices handling 25k+ requests per second.
- Provisioned highly available AWS infrastructure (EKS, RDS, VPC) using Terraform modules — reduced provisioning time from days to under 10 minutes.
- Designed Developer Self-Service pipelines with Helm + multi-stage GitHub Actions/GitLab CI, cutting deployment time by 40%.
- Built end-to-end observability stack (Prometheus, Grafana, Loki, ELK Stack) reducing MTTR to under 55 minutes across microservices.
- Led DevSecOps initiatives: least-privilege IAM, KMS encryption, Trivy + SonarQube in CI, and Infracost for proactive cost visibility — consistently reducing cloud costs by 20%.

Software Engineer | Cognitive Clouds - Bengaluru, India Jan 2021 – Aug 2022

- Engineered multi-stage Dockerfiles reducing image sizes by ~60% and significantly improving build speeds.
- Built CI/CD pipelines with GitHub Actions and GitLab CI, reducing release cycle time by 20%.
- Managed deployment workflows bridging dev and ops in an Agile environment.

INDEPENDENT PROJECT

Dual-Engine MLOps + AIOps Platform Jan 2024 – Present

github.com/Vinaycicdops/project_1

- AIOps Engine: Ensemble anomaly detector (Isolation Forest + LSTM Autoencoder) monitoring 8+ Prometheus metrics — dual-model consensus before alerting reduces false positives; detects anomalies within 30–40 seconds with Slack notification.
- MLOps Pipeline: 6-component KFP v2 workflow (data ingestion -> validation -> training -> evaluation -> promote -> save reference) with MLflow tracking and DVC versioning.
- Drift Monitoring: Integrated Evidently AI for data and concept drift detection (PSI + KS-test); FastAPI webhook auto-triggers Kubeflow Pipeline retraining on drift signal.
- Infrastructure: Fully declarative metrics config via YAML — zero Python changes needed to monitor new Prometheus metrics; Kubernetes manifests for full stack deployment.

EDUCATION

B.E. Computer Science — KSSEM, Bengaluru 2015 – 2019
