

VINAY B

DevOps Engineer | Platform Engineering | SRE | MLOps | AIOps

vinaybkrishna10@gmail.com · +91 8660953284 · Bengaluru, India · github.com/Vinaycicdops · linkedin.com/in/vinaybkrishna

PROFESSIONAL SUMMARY

Site Reliability / Platform Engineer with 3.5+ years of production experience designing self-healing, highly observable Kubernetes platforms across multi-cloud environments (GCP/AWS). Specialized in high-concurrency production support (25k+ RPS, 99.99% uptime), GitOps-driven automation, and AIOps-driven reliability. Expert at building automated remediation loops and observability stacks (ELK, Prometheus) to minimize MTTR and maintain strict SLIs/SLOs.

TECHNICAL SKILLS

Kubernetes & Cloud	GKE, EKS, GCP (Compute Engine, Storage, Monitoring), AWS, Helm, Kustomize, ArgoCD, Istio
Infrastructure & Automation	Terraform, Ansible, Vault, Bash, Python, GitHub Actions, GitLab CI, Jenkins
Observability & Networking	ELK Stack, Prometheus, Grafana, Loki, OpenTelemetry, Wireshark, TCP/IP, DNS
MLOps / AIOps	Kubeflow Pipelines (KFP v2), MLflow, DVC, KServe, Evidently AI, Isolation Forest, LSTM
Security	CodeQL, Trivy, SonarQube, Infracost, IAM, KMS
Languages & DBs	Python (ML/Data Engineering), Bash, PostgreSQL, MySQL, Redis, MongoDB

PROFESSIONAL EXPERIENCE

DevOps Engineer | Volt Security Pvt Ltd - Bengaluru, India

Dec 2023 – Jan 2026

- Administered production Kubernetes clusters (EKS/GKE) achieving **99.99%** uptime across 8 critical microservices handling **25k+ requests per second**.
- Provisioned highly available cloud infrastructure using Terraform modules — reduced provisioning time from days to **under 10 minutes**.
- Designed Developer Self-Service pipelines with Helm + multi-stage GitHub Actions/GitLab CI, cutting deployment time by **40%**.
- Defined and implemented comprehensive SLIs/SLOs for critical services; utilized reliability modeling to drive platform improvements and **reduce MTTR**.
- Built end-to-end observability stack (Prometheus, Grafana, Loki, ELK) defining SLIs/SLOs across 8 microservices — reduced **MTTR to under 55 minutes** and maintained 99.99% uptime error budget compliance.
- Led DevSecOps initiatives: least-privilege IAM, KMS encryption, Trivy + SonarQube in CI, and Infracost for proactive cost visibility — consistently **reducing cloud costs by 20%**.
- Experienced building on SaaS product engineering teams with a focus on high-availability and disaster recovery.

Software Engineer | Cognitive Clouds - Bengaluru, India

Jan 2021 – Aug 2022

- Engineered multi-stage Dockerfiles **reducing image sizes by ~60%** and significantly improving build speeds.
- Built CI/CD pipelines with GitHub Actions and GitLab CI, **reducing release cycle time by 20%**.
- Managed deployment workflows bridging dev and ops in an **Agile environment** to ensure reliable production releases.

INDEPENDENT PROJECT

Dual-Engine MLOps + AIOps Platform

Jan 2024 – Present

github.com/Vinaycicdops/project_1

- AIOps Engine: **Ensemble anomaly detector (Isolation Forest + LSTM Autoencoder)** monitoring 8+ Prometheus metrics — dual-model consensus before alerting reduces false positives; **detects anomalies within 30–40 seconds with Slack notification**.
- MLOps Pipeline: **6-component KFP v2 workflow** (data ingestion -> validation -> training -> evaluation -> promote -> save reference) with MLflow tracking and DVC versioning.
- Drift Monitoring: Integrated Evidently AI for data and concept drift detection (PSI + KS-test); FastAPI webhook auto-triggers Kubeflow Pipeline retraining on drift signal.
- Infrastructure: Fully declarative metrics config via YAML — **zero Python changes needed to monitor new Prometheus metrics**; Kubernetes manifests for full stack deployment.

EDUCATION

B.E. Computer Science — KSSEM, Bengaluru

2015 – 2019
