

VINAY B

DevOps Engineer | Platform Engineering | SRE | MLOps | AIOps

vinaybkrishna10@gmail.com · +91 8660953284 · Bengaluru, India · [github.com/Vinaycicdops](#) · [linkedin.com/in/vinaybkrishna](#)

PROFESSIONAL SUMMARY

Observability-focused SRE with 3.5+ years of experience designing high-availability, self-healing platforms for mission-critical trading and security environments. Specialized in "Observability as a Product" — building advanced anomaly detection engines (AIOps) and comprehensive monitoring stacks (Datadog, ELK, Prometheus) to act on business-impacting incidents proactively. Proven track record of maintaining 99.99% uptime at 25k+ RPS and reducing MTTR through automated remediation and toil reduction.

TECHNICAL SKILLS

Observability & SRE	Datadog (APM, RUM, Dashboards), ELK Stack, Prometheus, Grafana, Loki, OpenTelemetry, SLI/SLO Design
Cloud & Kubernetes	Azure, AWS (EKS, RDS, S3), Helm, Kustomize, ArgoCD, Istio, HPA/VPA
Automation & IaC	Terraform, Ansible, Vault, Python, Bash, GitHub Actions, GitLab CI, Jenkins
Networking & Reliability	Wireshark, TCP/IP, DNS, High Availability (HA) Design, Failover Optimization
Security	CodeQL, Trivy, SonarQube, Infracost, IAM, KMS
Languages	Python (Data/ML Engineering), Bash, PostgreSQL, MySQL, Redis, MongoDB

PROFESSIONAL EXPERIENCE

DevOps Engineer | Volt Security Pvt Ltd - Bengaluru, India Dec 2023 – Jan 2026

- Administered production Kubernetes clusters (EKS/Azure) achieving **99.99%** uptime across 8 critical microservices handling **25k+ requests per second**.
- Productized Observability:** Designed and implemented a comprehensive monitoring roadmap using Prometheus, Grafana, Loki, and ELK; defined SLIs/SLOs that **reduced MTTR to under 55 minutes**.
- Provisioned highly resilient infrastructure using Terraform modules — automated repeatable processes to reduce provisioning time from days to **under 10 minutes**.
- Developed self-service pipelines with Helm and GitLab CI/CD, enabling dev teams to own their deployments while maintaining strict operational excellence.
- Led reliability initiatives: implemented least-privilege security, KMS encryption, and proactive cost visibility (Infracost) — **reduced cloud spend by 20%**.
- Collaborated across cross-functional teams to integrate monitoring and alerting into all phases of the product delivery lifecycle.

Software Engineer | Cognitive Clouds - Bengaluru, India Jan 2021 – Aug 2022

- Built automated CI/CD pipelines with GitHub Actions and GitLab CI, **reducing release cycle time by 20%**.
- Engineered multi-stage Dockerfiles **reducing image sizes by ~60%** and improving deployment reliability in containerized environments.
- Managed deployment workflows in an **Agile environment**, ensuring seamless transitions from development to production operations.

INDEPENDENT PROJECT

Dual-Engine MLOps + AIOps Platform Jan 2024 – Present
[github.com/Vinaycicdops/project_1](#)

- AIOps Engine: **Ensemble anomaly detector (Isolation Forest + LSTM Autoencoder)** monitoring 8+ production metrics — dual-model consensus before alerting reduces false positives; **detects anomalies within 30–40 seconds with Slack notification**.
- MLOps Pipeline: **6-component KFP v2 workflow** (data ingestion -> validation -> training -> evaluation -> promote -> save reference) with MLflow tracking and DVC versioning.
- Drift Monitoring: Integrated Evidently AI for data and concept drift detection (PSI + KS-test); FastAPI webhook auto-triggers retraining on drift signal to ensure long-term model reliability.
- Infrastructure: Fully declarative metrics config via YAML — **zero manual changes needed to monitor new system metrics**.

EDUCATION

B.E. Computer Science — KSSEM, Bengaluru 2015 – 2019
