

VINAY B

DevOps & Cloud Security Engineer (AWS | Fintech Infrastructure)

vinaybkrishna10@gmail.com · +91 8660953284 · Bengaluru, India · github.com/Vinaycicdops · linkedin.com/in/vinaybkrishna

PROFESSIONAL SUMMARY

Security-focused DevOps Engineer specializing in high-scale Fintech infrastructure and AWS security optimization. Expert at scaling production EKS platforms to **25k+ RPS with 99.99% uptime** while ensuring 100% data integrity for SaaS environments. Specialized in building automated remediation loops, least-privilege IAM architectures, and "paved road" GitOps pipelines that balance speed with strict banking-grade compliance.

TECHNICAL SKILLS

AWS Security	IAM (Least Privilege) , KMS Encryption, WAF , Shield, GuardDuty, AWS Config, VPC Security Groups
Platform & K8s	Kubernetes (EKS), Helm, ArgoCD (GitOps) , Istio, Docker (Secure Images), HPA/VPA, KServe
Cloud & Infra	AWS (EC2, RDS, S3, VPC), Terraform , Ansible, Vault, Route53, ALB/NLB, CloudWatch
CI/CD & DevSecOps	GitHub Actions, GitLab CI, Trivy , SonarQube, Infracost, CodeQL, Jenkins
Observability	Prometheus, Grafana, Loki, ELK Stack, OpenTelemetry, AlertManager, AIOps Anomaly Detection

PROFESSIONAL EXPERIENCE

DevOps & Security Engineer | Volt Security Pvt Ltd

Dec 2023 – Jan 2026

Bengaluru, India

- Administered mission-critical EKS clusters handling 25k+ RPS, ensuring **100% data integrity** and 99.99% uptime for payment processing workflows.
- Provisioned secure AWS infrastructure (EKS, RDS, VPC) using **Terraform modules**, implementing least-privilege IAM and KMS encryption.
- Engineered security-first observability stacks (Loki/Prometheus) to monitor for both performance and **anomalous security events**.
- Designed "Paved Road" pipelines with Helm + GitHub Actions, reducing MTTR to under 55 minutes via automated remediation loops.
- Led DevSecOps initiatives reducing cloud costs by 20% while maintaining compliance with rigorous security standards.

Software Engineer | Cognitive Clouds

Jan 2021 – Aug 2022

Bengaluru, India

- Engineered multi-stage Dockerfiles reducing image sizes by 60% and improving build security.
- Built CI/CD pipelines with GitHub Actions and GitLab CI, reducing release cycle time by 20%.
- Managed deployment workflows bridging dev and ops in an **Agile environment**.

PROJECTS

Dual-Engine MLOps + AIOps Platform

github.com/Vinaycicdops/project_1

An **anomaly detection engine (LSTM + Isolation Forest)** monitoring 8+ Prometheus metrics. Features a **security-aware trigger loop** that auto-remediates anomalous production signals via Kubeflow Pipelines within 30-40 seconds.

EDUCATION

B.E. Computer Science · KSSEM, Bengaluru

2015 – 2019
